VIC customers: How to read your gas bill.

Site details

This shows exactly where the energy is being supplied. The MIRN (Meter Installation Registration Number) identifies the connection point to your property. This section also shows the period of time this invoice applies to, and the next scheduled read date.

Supply charges

This is where we calculate the charges on your bill. Each component of your tariff is listed here with the corresponding usage and price, all including GST.

How we calculate your usage

We subtract your Previous Read from your Latest Read to work out the volume of gas (in cubic metres) for the current billing period. This volume is then multiplied by the Heating Value and the Pressure Correction Factor (both set by the gas market operator) to work out your usage.

Gas usage

Compare your gas use over different periods.

Payment options

This payment slip shows you your payment options and gives you the info you need to pay your invoice. Some plans include card payment fees – you can check this in MyAccount (under My Plans).

Payment reference codes

Your payment reference codes are very (very) similar to your account number – just one digit longer. So be careful when you key them in, otherwise the payment can go to the wrong place.

Meter details

Your meter is physically read by your local gas distributor. Next to each read you'll see one of the following letters:

A (Actual) – the consumption shown is based on an actual reading of your meter

S (Substitute) – your gas distributor hasn't been able to read your meter and has given us substitute consumption data

E (Estimated) – your gas distributor hasn't given us an actual read, so the consumption shown is an estimate based off your past usage patterns.

F (Final Substitute) – your gas distributor hasn't been able to read your meter and can't get an actual read for this period. That means this substitute consumption data is final and will not be replaced.
